BATSAL AWALEY

SENIOR RUBY ON RAILS ENGINEER · SYSTEMS & CLOUD ARCHITECTURE

Sydney, NSW, Australia | batsal.awaley@gmail.com | github.com/lastab | linkedin.com/in/batsal

PROFILE

Senior Ruby on Rails engineer with 7+ years of experience owning system design and technical strategy for high-growth SaaS platforms, from service boundaries and data layer to the AWS infrastructure underneath. Proven track record decomposing legacy Rails applications with zero downtime, optimizing PostgreSQL under real production load, and designing cost-effective, resilient cloud infrastructure. The engineer architecture and infrastructure decisions get escalated to.

EXPERIENCE

Full-Stack Developer · Sentia

May 2026 – Sep 2026 · 5 mos

Sydney, NSW, Australia · Hybrid

- Owned delivery of full-stack features across multiple concurrent client platforms, built end to end on Ruby on Rails, Hotwire, Stimulus, React, and PostgreSQL, on tight consultancy timelines.
- Took third-party integrations (Xero, Cloudflare RealtimeKit, MCP-based AI tools) from spec to production, including error handling, retry logic, and payload encryption, not just the happy path.
- Drove PostgreSQL query optimization and schema changes that cut latency and held stability under peak load, without waiting to be asked.
- Held the line on code quality with high-coverage RSpec suites and structured refactoring, so what ships stays maintainable.

Ruby on Rails / Hotwire / Stimulus / React / PostgreSQL / RSpec / Xero API / Cloudflare RealtimeKit / MCP / AWS / TDD

Software Developer · ShiftCare

Sep 2019 – Mar 2024 · 4 yrs 6 mos

Sydney, NSW, Australia · Hybrid

- Owned the phased decomposition of a large-scale Rails production monolith into decoupled services, planning and driving it end to end while handling and mentoring junior developers on the team.
- Architected and executed the AWS cloud infrastructure strategy encompassing compute, queuing via Sidekiq/Redis, networking, and secrets management to ensure optimal system performance and resilience as the platform scaled.
- Built the testing and deployment strategy from the ground up with Cypress, RSpec, Docker, and AWS, turning releases from a fire drill into a routine.
- Maintained and progressively upgraded legacy code across the platform, keeping older modules stable and secure while guiding junior engineers through core codebase components.

Ruby on Rails / Vue.js / PostgreSQL / Sidekiq / Redis / AWS / Docker / Cypress / RSpec / Firebase / TDD

Software Engineer · Vayu Technology

Dec 2016 – Jul 2019 · 2 yrs 8 mos

- Built and maintained full-stack product features across web and mobile using Ruby on Rails, React Native, Vue.js, and jQuery.
- Owned database design and management for the core product: schema, performance, and the decisions that kept both holding up as it grew.
- Delivered cross-platform mobile functionality in React Native against a shared Rails API backend.
- Maintained and progressively modernized legacy jQuery interfaces, migrating key views over to Vue.js.

Ruby on Rails / React Native / Vue.js / jQuery / Databases / TDD

SKILLS

Backend & Architecture Ruby on Rails, Monolith Decomposition, Service Objects, REST / GraphQL APIs, Sidekiq, Redis

Cloud & Infrastructure AWS (Compute, Networking, Secrets Manager, Queuing), Docker, Kubernetes, Heroku, CircleCI, Jenkins, GitHub Actions

Databases & Data PostgreSQL, MySQL, Query Optimization, Schema Design, Data Encryption & Access Control

Frontend & Testing Hotwire, Stimulus, React.js, Vue.js, TypeScript, RSpec, Cypress, TDD

EDUCATION

University of Southern Queensland Jul 2019 – Jun 2021
Master of Science, Applied Data Science

Cosmos College of Management and Technology 2011 – 2015
Engineer's Degree, Computer Engineering
